Subject Index

ABC syndrome, 201
Absence seizures, 339–343
Academic achievement, 745–749
Acetazolamide, 600–602
N-Acetylaspartate, 636–640
Acetylcholine receptors, 275–278
Acidosis, 657–660, 770–771
Aciduria, 136–138
Acquired auditory neuropathy, 205
Acridine orange, 851
Acute necrotizing encephalopathy, 461–462
Acyl coenzyme A dehydrogenase deficiency, 205
Adenomas, 364–366
Adenylosuccinate lyase deficiency, 301–307
ADHD, 679, 719–725, 779, 891–894
Adolescents, 157–162, 241–250, 284, 286–288, 364–366, 553–559, 727–730
Adrenergic agonists, 34
Adrenergic receptors, 272–273
Affective illness, 553–559
A5814G mutation, 531–532
Aganglionosis, 296–297
Agnosia, 698–702
Aicardi-Goutieres syndrome, 759–761
Alloimmune thrombocytopenia, 838–842
Alpha$_2$-adrenergic agonists, 34
Ambulatory subspecialty clinics, 645–650
Amino acids, 674
Amyotrophy, 209
Analgesics, 448–449
Aneurysm, 868–869
Angiokeratomas, 204
Angioma, 614–615
Angiomyolipomas, 677
Ankle, 49, 52–53
Anorexia, 284–285
Anterior spinal artery syndrome, 134–135
Anticoagulants, 862–863
Anticonvulsant blood levels, 164–168
Anticonvulsants, 76, 845
Antidepressants, 75
Antiepileptics, 367–369, 603–605
Antihistamines, 75
Anti-inflammatories, 76
Antineuronal nuclei immunohistochemical staining patterns, 548–551
Antioxidants, 603–605
Antiphospolipid syndrome, 690–692
Aotus brumbacki, 463
Aphasia, 345–350
Apnea, 600–602, 751
Apoptosis, 438–442
Apraxia, 751
Arhinencephaly, 928
Arthrodesis, 50
Arthrogryposis multiplex congenita, 934–935
Asperger's syndrome, 253–256
Asphyxia, 781–789
Astrocytoma, 678
Asymmetric crying facies, 778
Ataxia, 174–176, 283
Athetosis, 793–797
Atrophy, 79–82, 291–293, 809–818, 934–935
Attention, 155, 288–290, 679
Attention-deficit hyperactivity disorder, 679, 719–725, 779, 891–894
Auditory brainstem response, 772–774
Auditory neuropathy, 205, 233
Autism, 169–173, 232, 357–362, 387, 421–424, 509–512, 679, 809–818
Autosomal-dominant demyelinating/axonal polyneuropathy, 207
Axonal neuropathy, 207, 208–209
Axonal polyradiculoneuropathy, 210
Axon reflex, 201

Baclofen, 5, 19–20, 31–35
Bacterial meningitis, 854–857
Basal ganglia, 461–462, 591–594
Bayley Scales of Infant Development, 493–498, 832–836
B-cell depletion chemotherapy, 206
Becker's muscular dystrophy, 870–871
Behavioral disturbances, 288–290
Bell's palsy, 565–567
Benign idiopathic partial epilepsies, 874–880
Benign intracranial hypertension, 458–460, 465–469
Benign myoclonus, 109–112
Benign rolandic epilepsy, 232
Benzodiazepines, 31–32
Beta-adrenergic blockers, 74–75
Bilateral vocal cord palsy, 932–934
Biomechanics, 11–12
Botulinum toxin, 18–19, 37–44, 113–117
Brachial plexus injury, 488–492
Brain, 61, 141–144, 241–250, 309–315, 325–332, 388, 421–424, 438–442, 446–447, 595–597, 678, 798–805, 809–818, 820–830, 849–853, 891–894, 924
Brainstem, 614–615, 751–757, 767–769, 772–774, 923, 927
Brainwarts, 928
Breath holding, 697
BRN2 gene, 918–929
Bronchiolitis, 105–108
Brumback, Roger Alan, 940–941
Budesonide, 458–460
Bulbar weakness, 204

Calcium channels, 76
Callosal agenesis, 926
Cardiac dysautonomia, 370–373
Cardiomyopathy, 531–532
Cardiovascular function, 299, 531–532
Carnitine-deficient myopathy, 642–644
Carotid artery, 446–447
Catecholamine receptors, 272–274
Cat scratch encephalopathy, 282, 762–763
Central nervous system, 271–278, 283, 493–498, 673, 683–685
Central sleep apnea, 600–602
Cerebellar atrophy, 809–818
Cerebral abnormalities, 677
Cerebral cortex, 918–929
Cerebral glucose, 798–805
Cerebral hemorrhage, 283–284
Cerebral infarct, 294–295, 738
Cerebral injury, 299–300
Cerebral maturation, 714–717
Cerebral mycotic aneurysm, 868–869
Cerebral palsy, 1–69, 113–117, 425–429, 735–741, 793–797
Cerebral venous thrombosis, 574–579, 738
Cerebral white-matter disease, 401–407
Cerebrospinal fluid, 79–82, 704–706
Cerebrovascular disease, 541–546, 735–741
Ceroid lipofuscinosis, 707–712
Chemotherapy, 206, 283
Chiari malformations, 936–939
Child Behavior Checklist, 719–725
Childhood Autism Rating Scale, 395–400
Children's Coma Score, 236–240
Children's Global Assessment of Functioning, 395–400
Children's Psychiatric Rating Scale, 395–400
Choline, 636–640
Choreoathetosis, 874–880
Chromosome 15, 911–914
Chromosome 22q11, 450–452, 778
Chronic sleep onset insomnia, 86–91
Clinical Global Impression, 395–400
CLN5, 707–712
Clonidine, 380–381
Club foot, 207
C nociceptors, 201
Coagulation, 576, 862–863
Coenzyme A dehydrogenase deficiency, 205
Cognitive function, 58–62, 100–104, 119–123, 181–183, 288–290, 309–315, 325–332, 676–677, 745–749, 901–904
Coma, 236–240, 283
Communication, 309–315, 678
Computed tomography, 257–263, 339–343, 443–445, 586
Computer-assisted microdensitometry, 851
Concussion, 83–85
Congenital asymmetric crying facies, 778
Congenital club foot, 207
Congenital fiber type disproportion, 205–206
Congenital heart defects, 471–475
Congenital hypomyelination neuropathy, 205–206
Congenital varicella syndrome, 595–597
Continuous-display four-channel electroencephalographic monitoring, 625–628
Convulsions, 174–176, 874–880, 907
Corpus callosum, 926–927
Cortical development, 382–385, 849–853
Corticosteroids, 565–567, 762–763
Craniectomy, 936–939
Creatine, 636–640
Crohn's disease, 458–460
Crouch gait, 11–12
Crying facies, 778
Cryptogenic seizures, 820–824
CT, 257–263, 339–343, 443–445, 586
Cyclosporin, 825–830
Cystic fibrosis, 283–284
Cytochrome *c* oxidase deficiency, 608–613, 616–618
Cytoskeleton, 673

Dandy-Walker syndrome, 751–757
Dantrolene sodium, 33–34
Dehydrogenase deficiency, 205
Demyelinating polyneuropathy, 207, 209–210
Demyelinating polyradiculoneuropathy, 210
Dentatorubral-pallidoluysian atrophy, 79–82
Dermatomyositis, 206
Developmental disorders, 131–133, 169–176, 388, 395–400, 581–584, 645–650, 751, 781–789, 911–914
Diabetes, 209, 389–392, 919
Diarrhea, 387, 907
Diazepam, 911–914
Diencephalon, 927
Diffusion-weighted imaging, 526–530
Dimethylglycine, 169–173
Divalproex, 731–734
Dizziness, 727–730
DNA, 136–138, 284–285, 531–535
Dopamine, 273–274
Dorsal cyst, 920–922
Dorsal rhizotomy, 19
Dorsoventral gradient, 918–929
Down syndrome, 438–442, 868–869
Dysautonomia, 370–373
Dyskinesia, 876
Dysplasia, 285
Dystonia, 222–225, 606–608

PEDIATRIC NEUROLOGY FACULTY POSITION

Saint Louis University, a Catholic, Jesuit institution dedicated to education, research, and health care, is seeking applicants in The Section of Child Neurology for a 6th board-eligible or certified child neurologist to participate in an active academic program emphasizing clinical practice, teaching, and clinical research. Subspecialty fellowship training is desirable but not required. The affiliated pediatric institution, Cardinal Glennon Children's Hospital, serves as a tertiary care center for a large portion of southeast Missouri and southern Illinois, providing a remarkable opportunity for clinical and professional growth. The program provides residency training experience for both Child and Adult Neurology trainees within the Department of Neurology, and teaching skills are strongly valued. Saint Louis University is an affirmative action, equal opportunity employer and encourages nominations of and applications of women and minorities. Please forward CV to:

Thomas J. Geller, MD
Department of Neurology
Saint Louis University Hospital
3635 Vista Ave. at Grand Blvd.
